

Polished Rod Clamp

Description

Polished rod clamp, a kind of device attached to the polished rod, works together with the pumping unit carrier bar to secure a polished rod to the surface pumping unit.

Classification

Polished rod clamps can be classified as single bolt polished rod clamp, double bolts polished rod clamp and three bolts polished rod clamp according to the number of bolts.

| Specification of Polished Rod Clamp | | | | | | |
|-------------------------------------|--|-----------|-------------------------|-------------------|---------------|---------------------------------------|
| No. | Type | Size (in) | OD of Polished Rod (mm) | Working Load (KN) | Hardness (HB) | Material |
| 1 | Single Bolt Double Bolts Three Bolts | 1 | 25 | 160-800 | 190-300 | AISI 1045 AISI 1536M AISI 1526M |
| 2 | | 1-1/8 | 28 | | | |
| 3 | | 1-1/4 | 32 | | | |
| 4 | | 1-1/2 | 38 | | | |

Note: When choosing polished rod clamps, you must know the working load of the sucker rod string. If not, improper usage will break the polished rod clamp.
